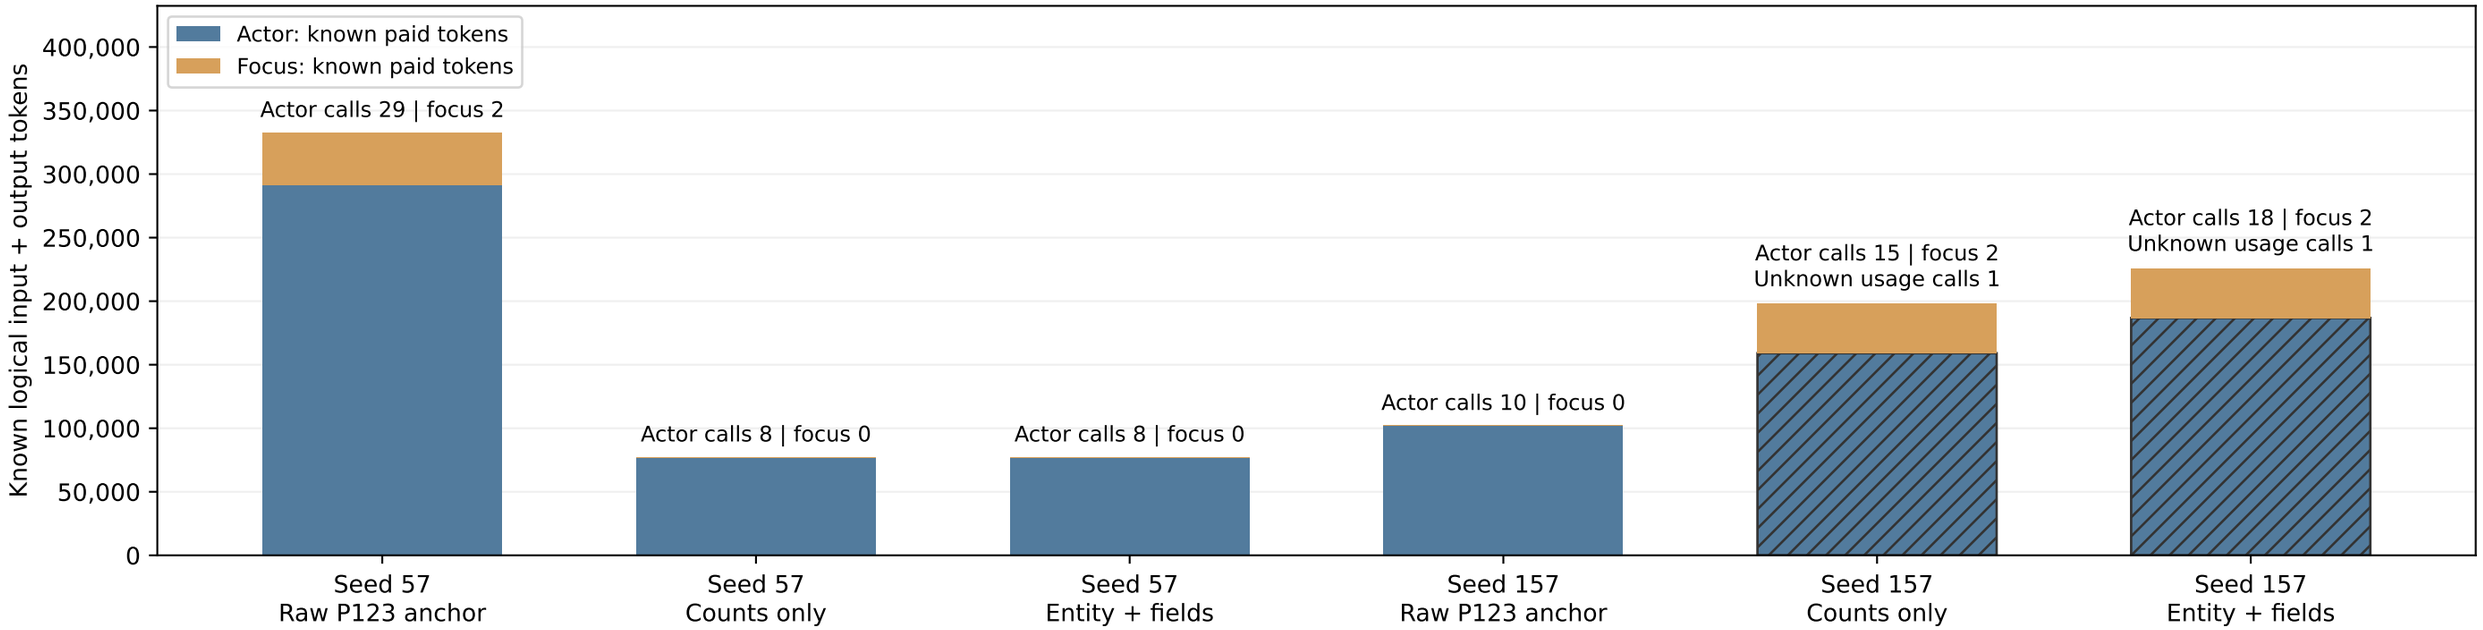
P135 — Paid work and observed intervention

All modes pay host observation/capture costs. Actual automatic notice exposure, entity rows and explicit queries are separate.



Observed measure	Seed 57 Raw P123 anchor	Seed 57 Counts only	Seed 57 Entity + fields	Seed 157 Raw P123 anchor	Seed 157 Counts only	Seed 157 Entity + fields
Checkpoint captures	2	0	0	0	1	2
Actor calls with automatic notice	0	0	0	0	1	2
Cumulative automatic entity rows	0	0	0	0	0	0
Explicit queries / rejections	0 / 0	0 / 0	0 / 0	0 / 0	0 / 0	0 / 0
Host observation/capture/query time (s)	0.005	0.004	0.004	0.003	0.002	0.002
Final enumeration status	unknown	unknown	unknown	closed	unknown	unknown

Entity-row exposure is cumulative across paid actor requests, not the number of unique entities or completed obligations.
A capture without subsequent model dispatch is not exposure. Explicit query replies enter ordinary paid history; the table counts requests.
Run-scoped handles/hash values differ between modes: the first input divergence cannot be attributed to entity content alone.
Host seconds overlap work/session time and are not added again. Bytes are never converted to tokens. Enumeration is not official success.
