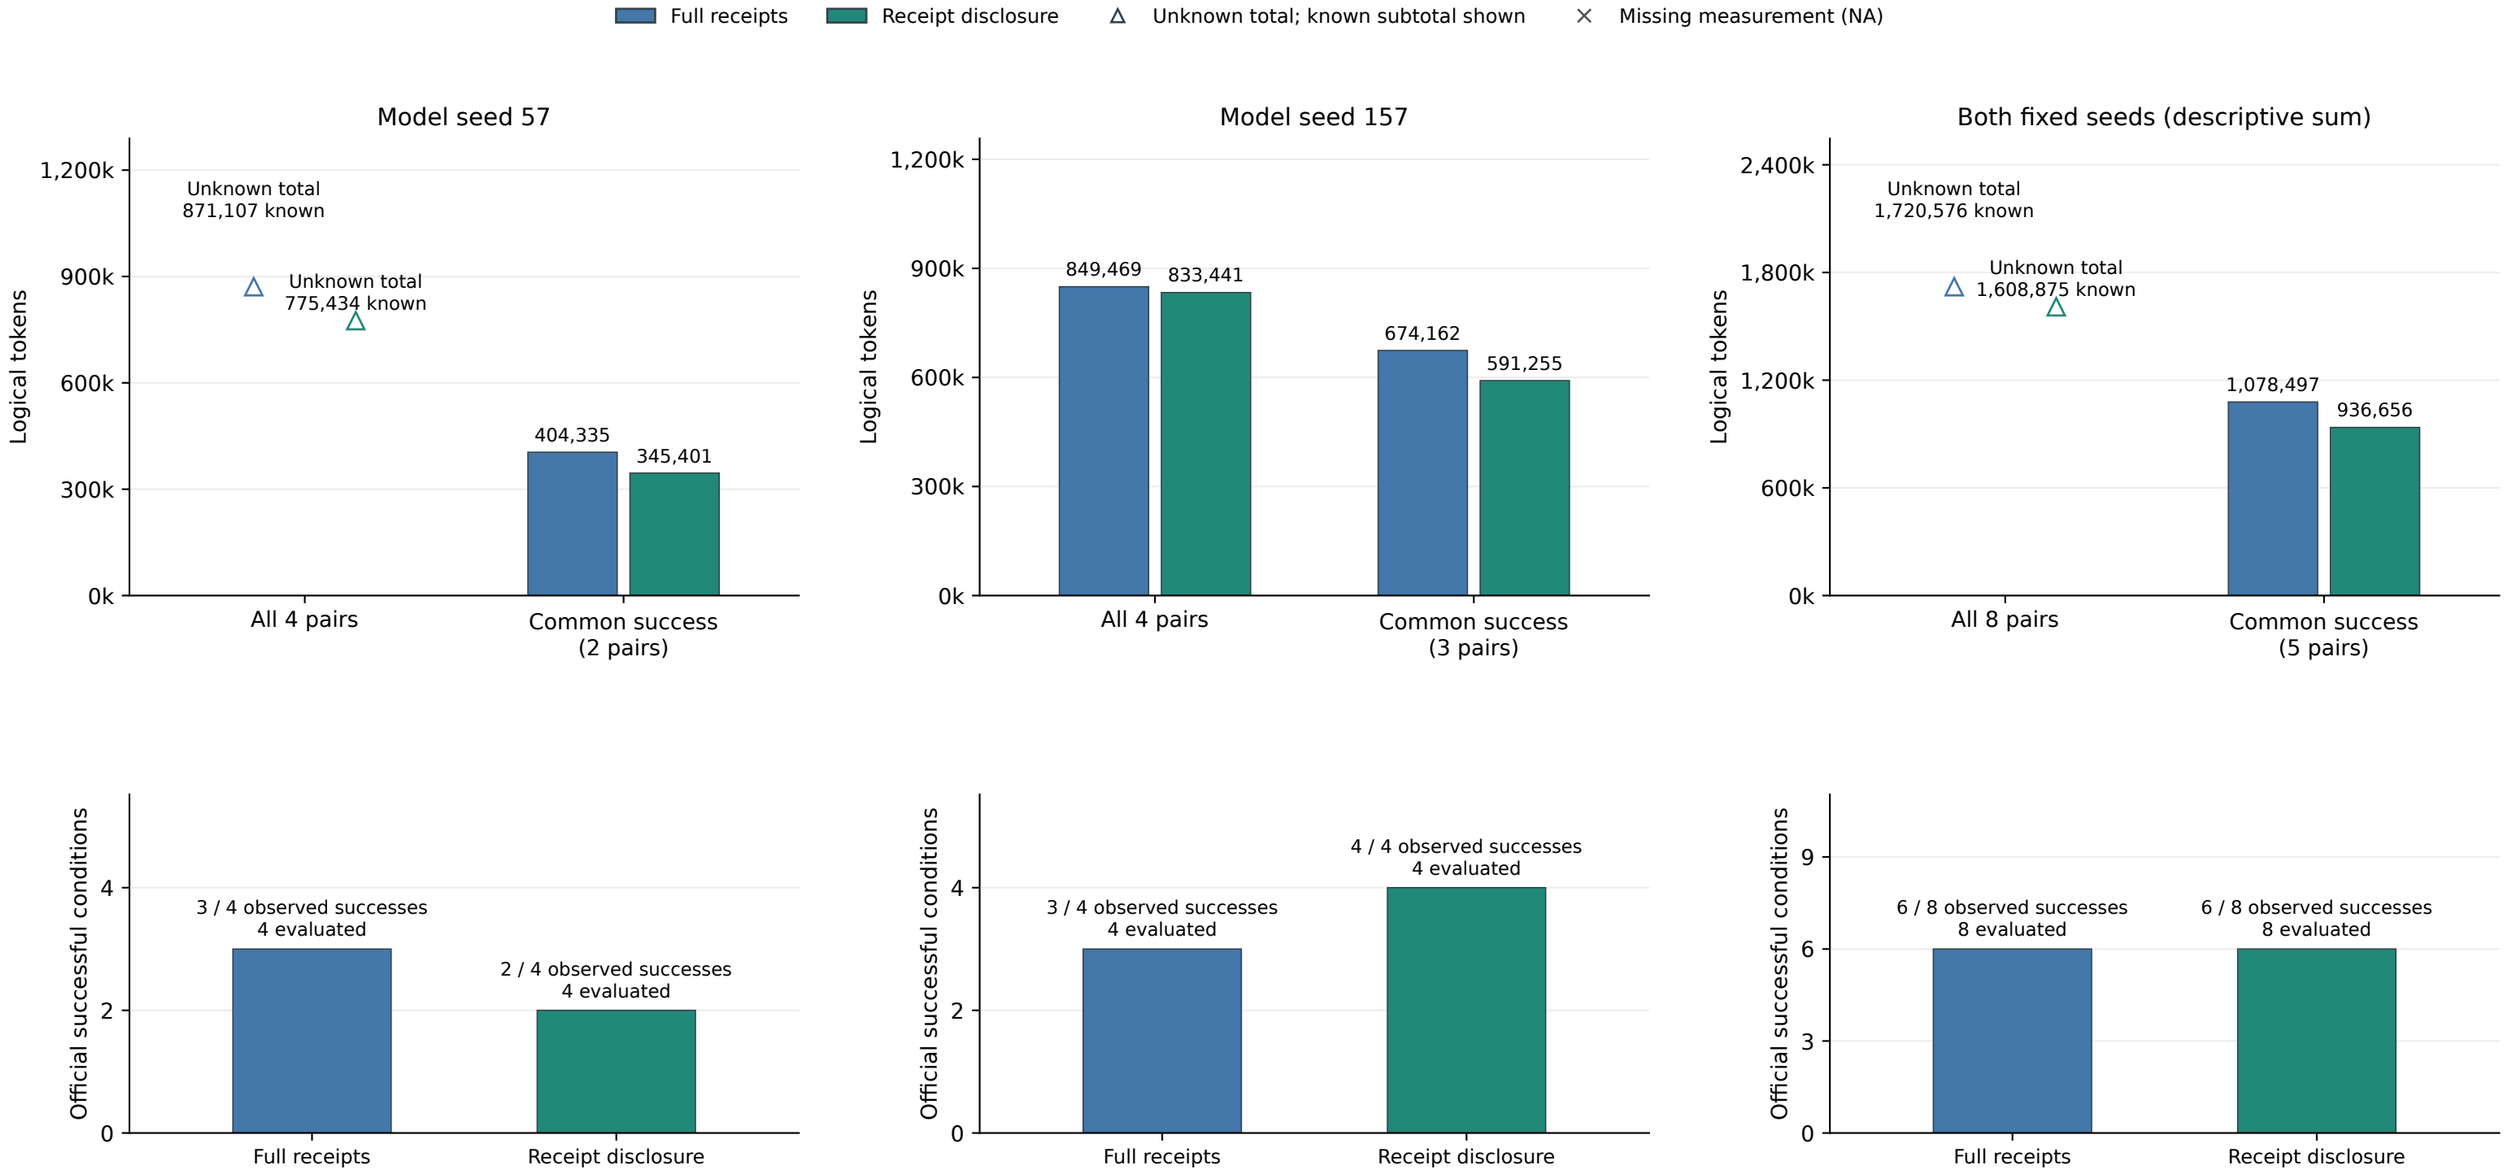
P128 — ordinary receipt disclosure calibration



Fixed development gate: False. Per-seed token/quality checks: 57: False, 157: True. Audit errors: 0.
All-task totals include failures. Common success means both modes succeeded on the same task and seed; it does not replace the all-task total.
Success counts retain unassessed conditions. Repeated seeds are not independent tasks; sums are descriptive, not confidence intervals.
Bytes, API/cache counts and receipt disclosures are not token savings. Overlapping time measures are not added or stacked.
