P139 — Primary comparison and four factorial edges

Primary utility gate: False | Combination / both-control development gate: False
T = threshold; E = paid prefix exposure; R = recursive replacement; D = second-opportunity delta. All arms allow at most 2 opportunities.

PRIMARY: E/D − T/R | primary utility

Pair	Δ logical tokens	Official outcome	Actual intervention	Observed prefix match
Task 1	+0	Both successful	False	n/a
Task 2	+0	Both successful	False	n/a
Task 3	+0	Both successful	False	n/a
Task 4	null	SUCCESS LOST	True	n/a

All-task Δ null | Common success 3/4; Δ null | Common-success intervention False | Fixed gate False

E/D − E/R | representation at exposure

Pair	Δ logical tokens	Official outcome	Actual intervention	Observed prefix match
Task 1	+0	Both successful	False	null
Task 2	+0	Both successful	False	null
Task 3	+0	Both successful	False	null
Task 4	null	Both failed	False	False

All-task Δ null | Common success 3/4; Δ null | Common-success intervention False | Fixed gate False

E/D − T/D | timing with delta

Pair	Δ logical tokens	Official outcome	Actual intervention	Observed prefix match
Task 1	+0	Both successful	False	n/a
Task 2	+0	Both successful	False	n/a
Task 3	+0	Both successful	False	n/a
Task 4	null	SUCCESS LOST	True	n/a

All-task Δ null | Common success 3/4; Δ null | Common-success intervention False | Fixed gate False

T/D − T/R | representation at threshold

Pair	Δ logical tokens	Official outcome	Actual intervention	Observed prefix match
Task 1	+0	Both successful	False	null
Task 2	+0	Both successful	False	null
Task 3	+0	Both successful	False	null
Task 4	+18,567	Both successful	False	False

All-task Δ +18,567 | Common success 4/4; Δ +18,567 | Common-success intervention False | Fixed gate False

E/R − T/R | timing with recursive

Pair	Δ logical tokens	Official outcome	Actual intervention	Observed prefix match
Task 1	+0	Both successful	False	n/a
Task 2	+0	Both successful	False	n/a
Task 3	+0	Both successful	False	n/a
Task 4	null	SUCCESS LOST	True	n/a

All-task Δ null | Common success 3/4; Δ null | Common-success intervention False | Fixed gate False

null stays null: all/common cost differences require all four pairs known; empty common-success sets remain null.
Per-pair known differences do not replace a null fixed aggregate. A cheap failed run is not preserved task quality.
Prefix matching and intervention are recorded audit evidence, not causal or semantic guarantees. No novelty, general quality or prior-cohort pooling claim.
