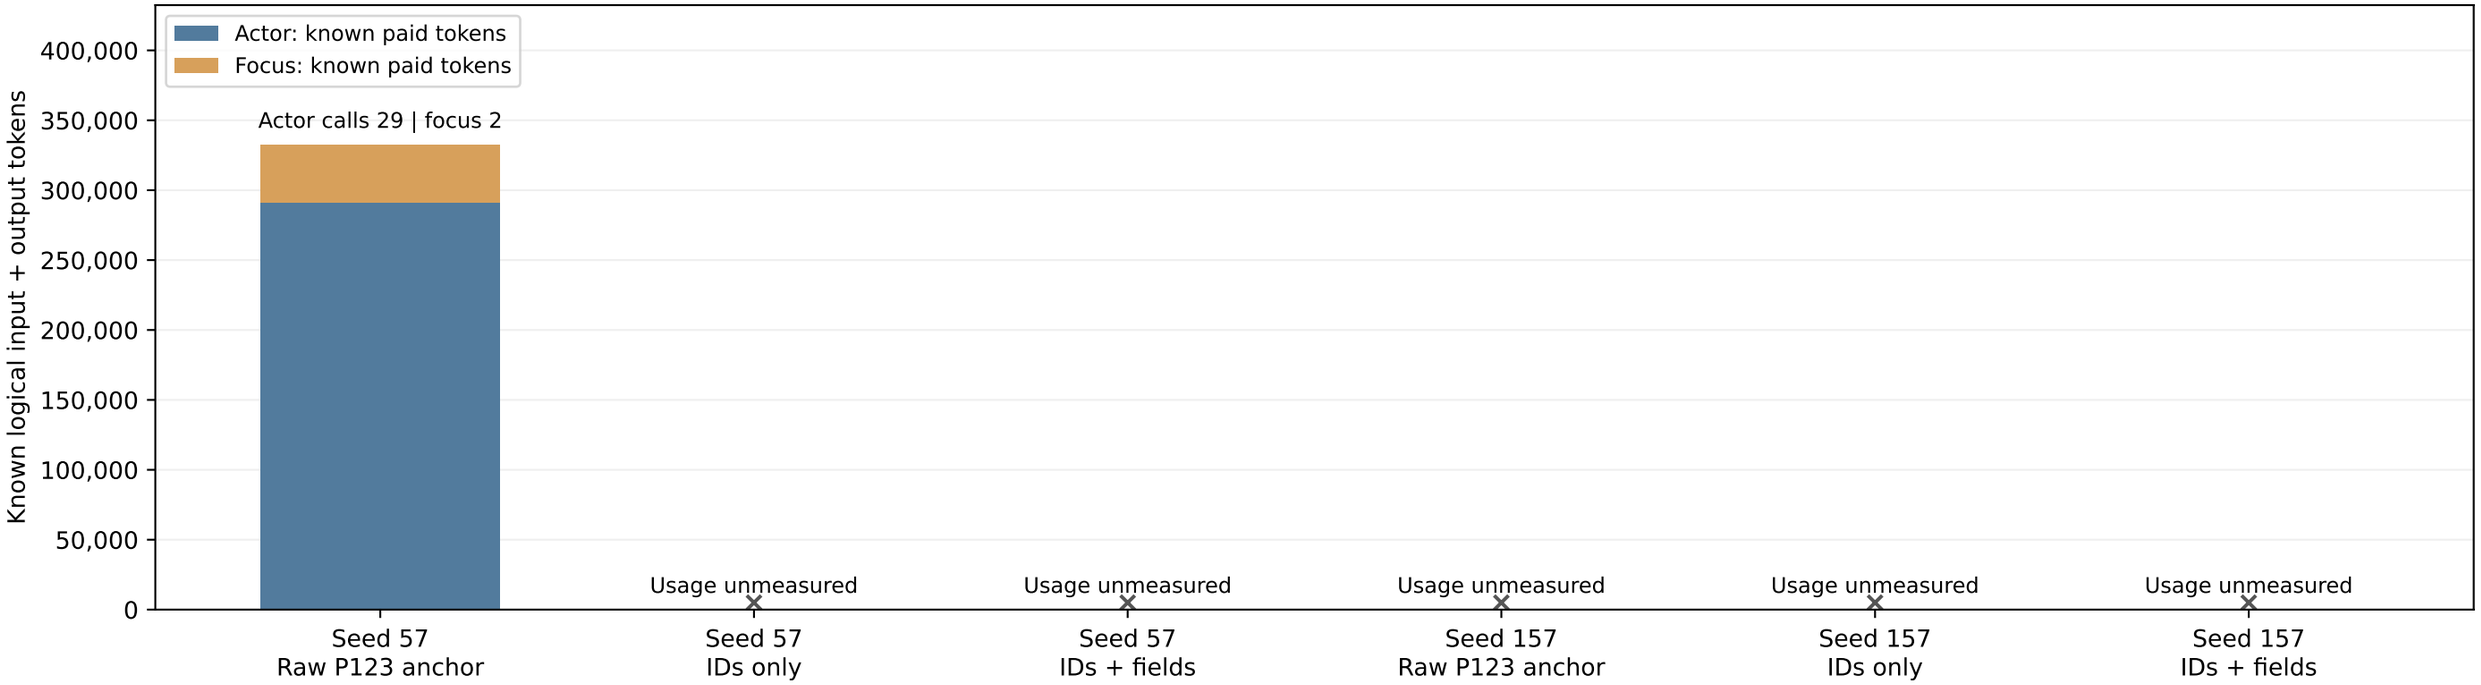
P136 — Paid work and observed intervention

All modes pay host observation/capture costs. Notice dispatch, cumulative ID rows and rows with missing fields are separate.



Observed measure	Seed 57 Raw P123 anchor	Seed 57 IDs only	Seed 57 IDs + fields	Seed 157 Raw P123 anchor	Seed 157 IDs only	Seed 157 IDs + fields
Checkpoint captures	2	unmeasured	unmeasured	unmeasured	unmeasured	unmeasured
Actor calls with automatic notice	0	unmeasured	unmeasured	unmeasured	unmeasured	unmeasured
Cumulative automatic ID rows	0	unmeasured	unmeasured	unmeasured	unmeasured	unmeasured
Rows with missing-field associations	0	unmeasured	unmeasured	unmeasured	unmeasured	unmeasured
Queries / rejections (absent interface)	0 / 0	unmeasured	unmeasured	unmeasured	unmeasured	unmeasured
Host observation/capture time (s)	0.005	unmeasured	unmeasured	unmeasured	unmeasured	unmeasured
Final enumeration status	unknown	unmeasured	unmeasured	unmeasured	unmeasured	unmeasured

ID and field-row exposure is cumulative across paid actor requests, not unique entities or completed obligations.
A capture without subsequent dispatch is not exposure. All modes use the original raw initial guide and tools; queries are absent.
No public handle is displayed. Equal initial inputs do not guarantee equal trajectories across independent runs.
Host seconds overlap work/session time and are not added again. Bytes are never converted to tokens. Enumeration is not official success.
